

Glass design should not only reduce the amount of leaded glass and glass painting

There are different techniques of glass design and we can mix most of them. They also stimulate each other and sometimes we have to create a new glass design techniques for your needs.

Currently, we apply the following techniques: glass design with lead or brass, lamination of glass, facets, painting on float-glass, fusing glass, glass etching, traditional glass painting, sandblasting, silk-screen printing

We work from: the sketches of the artist, your own sketches, our sketches.

It may not always be a big project like shown at the right.
 We are also pleased to be able to run smaller projects for you.

Talk to us.
